INDEX TO SUBJECTS

A

Acetylcholine metabolism in nervous system of *Aplysia californica*, 725
Acid, amino, decreased accumulation of, by Ehrlich ascites tumor cells in presence of metabolic inhibitors, 681
Acids, aromatic carboxylic, inhibition of membrane muscle chloride conductance by, 879
Adaptation, visual, and proximal negative response in skate retina, 57
Adenosine triphosphate, extracellular, Na and K diffusion potentials with, in dog red blood cells, 417
Adenosine triphosphate, membrane compartmentalized, and its preferential use by Na, K-ATPase of human red cell ghosts, 605
Adenosine triphosphate-dependent calcium efflux in dialyzed squid giant axons, 795
Ameba movement, relation to membrane-controlled electrical currents, 743
Anesthetics, local, hydrophilic and hydrophobic pathways for drug-receptor reaction, 497
–, local, pH-dependent rate of action on node of Ranvier, 475
Aorta, rabbit, releasable Ca fractions in smooth muscle cells of, 401
Aplysia californica, metabolism of acetylcholine in nervous system, 725
Axon, median giant, of earthworm, resistance of septum, 517
Axon membranes, squid, kinetic analysis of pancuronium interaction with sodium channels, 293
Axons, dialyzed, of squid, magnesium efflux in, 389
–, giant, dialyzed, of squid, ATP-dependency of calcium efflux in, 795
–, giant, of *Myxicola*, sodium efflux in, 765

B

Behavior, encoder, repetitive firing, in slowly adapting stretch receptor of crayfish and eccentric cell of *Limulus*, quantitative analysis, 849
Blood cells, red. See Erythrocytes.
Blood vessel radii and shear forces in the cardiovascular system, 449

C

Calcium dependency of force velocity relations of single cardiac muscle cells, 221
– fractions, releasable, in smooth muscle cells of rabbit aorta, 401
– movement, intracellular, regulation of by magnesium in skinned muscle fibers, 1
– release, chloride-induced, in skinned muscle fibers, influence of magnesium, 17
Calcium-activated conductance in skate electroreceptors, current clamp experiments, 121
– conductance in skate electroreceptors, voltage clamp experiments, 145
Carbon dioxide, diffusion of through lipid bilayer membranes, 779
Cell, eccentric, of *Limulus*, and slowly adapting stretch receptor of crayfish, encoder behavior, repetitive firing, quantitative analysis, 849
Cells, Ehrlich ascites tumor, decreased amino acid accumulation by, in presence of metabolic inhibitors, 681
–, muscle, single, force velocity relations of, calcium dependency, 221
–, red blood. See erythrocytes.
–, smooth muscle, of rabbit aorta, releasable Ca fractions in, 401
–, visual, *in situ*, in lateral eye of *Limulus*, properties, 203
Channels, sodium, interaction with pancuronium in squid axon membranes, kinetic analysis, 293
Chloride conductance in muscle fibers of rat diaphragm, 325
Conductance, calcium-activated, in skate electroreceptors, current clamp experiments, 121
–, calcium-activated, in skate electroreceptors, voltage clamp experiments, 145
–, chloride by muscle membrane, inhibition by aromatic carboxylic acids, 879
Conductance, chloride, in muscle fibers

of rat diaphragm, 325
Conductance, potassium, of frog node of Ranvier, effects of strychnine, 897
–, sodium, of frog node of Ranvier, effects of strychnine, 915

D

Degeneration, hereditary, retinal, in *Drosophila melanogaster*, mutant defect associated with phototransduction process, 261
Desensitization and recovery at frog neuromuscular junction, 431
Dopamine exchange diffusion induced in lipid bilayer membranes by ionophore X537A, 633
Drosophila melanogaster, hereditary retinal degeneration, mutant defect associated with phototransduction process, 261
–, visual system, frequency characteristics, 705

E

Encoder behavior, repetitive firing, in slowly adapting stretch receptor of crayfish and eccentric cell of *Limulus*, quantitative analysis, 849
Encoders, model, feedback in, repetitive firing, quantitative study, 815
Erythrocyte ghosts, human, membrane compartmentalized ATP and its preferential use by Na, K-ATPase of, 605
– membrane, human, relation between anion and exchange and net anion flow, 363
Erythrocytes, dog, Na and K diffusion potentials with extracellular ATP, 417
–, flounder, volume regulation in anisotonic media, 537
–, human, transport of uridine, 75
Eye, lateral, *in situ*, of *Limulus*, properties, 203
–, ventral, of *Limulus*, enhancement and phototransduction in, 553

F

Feedback in model encoders, repetitive firing, quantitative study, 815
Fibers, muscle, of rat diaphragm, chloride conductance, 325
–, Purkinje, beating canine cardiac, effect of extracellular potassium on intracellular potassium ion activity and transmembrane potentials of, 463
–, skinned muscle, influence of magnesium on chloride-induced calcium release, 17
Fibers, skinned muscle, regulation by magnesium of intracellular calcium movement, 1
Firing, repetitive, encoder behavior of slowly adapting stretch receptor of crayfish and eccentric cell of *Limulus*, quantitative analysis, 849
–, repetitive, feedback in model encoders, quantitative study, 815
Fluorocarbon emulsion media, beneficial effect on function of neuromuscular preparations in vitro, 655
Force velocity relations of single cardiac muscle cells, calcium dependency, 221
Forces, shear, and blood vessel radii in the cardiovascular system, 449
Fractions, Ca, releasable, in smooth muscle cells of rabbit aorta, 491
Frequency characteristics of *Drosophila* visual system, 705

G

Guanosine 3′,5′-cyclic monophosphate, and in vitro physiology of frog photoreceptor membranes, 667

I

Inhibitors, metabolic, decreased amino acid accumulation by Ehrlich ascites tumor cells in presence of, 681
Ionophore X537A, induction of dopamine exchange diffusion in lipid bilayer membranes, 633

J

Junction, frog neuromuscular, desensitization and recovery at, 431

L

Limulus eccentric cell and crayfish slowly adapting stretch receptor, encoder behavior, quantitative analysis, 849
– eye, lateral, *in situ*, properties, 203
– eye, ventral, enhancement and phototransduction in, 553
Lipid bilayer membranes, exchange diffusion of dopamine induced by ionophore X537A, 633
–, bilayer membranes, ion transport across, phloretin-induced changes in, 243

M

Magnesium efflux in dialyzed squid axons, 389
–, influence of, on chloride-induced calcium release in skinned muscle fibers, 17
–, regulation by, of intracellular calcium movement in skinned muscle fibers, 1
Man, red blood cell membrane, relationship between anion exchange and net anion flow, 363
–, red cell ghosts, membrane compartmentalized ATP and its preferential use by Na, K-ATPase of 605
–, transport of uridine in red blood cells, 75
Membrane chloride conductance, muscle, inhibition by aromatic carboxylic acids, 879
–, human erythrocyte, relation between anion exchange and net anion flow, 363
Membranes, frog photoreceptor, in vitro physiology and guanosine 3′,5′-cyclic monophosphate, 667
–, lipid bilayer, diffusion of carbon dioxide through, 779
–, lipid bilayer, exchange diffusion of dopamine induced by ionophore X537A, 633
–, lipid bilayer, phloretin-induced changes in ion transport across, 243
–, squid axon, kinetic analysis of pancuronium interaction with sodium channels, 293
Monophosphate, guanosine 3′,5′-cyclic, and in vitro physiology of frog photoreceptor membranes, 667
Movement, ameboid, relation to membrane-controlled electrical current, 743
Mucosa, olfactory, differential sorption of odorant molecules across, 343
Muscle cells, single, force velocity relations of, calcium dependency, 221
– cells, smooth, of rabbit aorta, releasable Ca fractions in, 401
– fibers, skinned, influence of magnesium on chloride-induced calcium release, 17
– fibers, skinned, regulation by magnesium of intracellular calcium movement, 1
– membrane chloride conductance, inhibition by aromatic carboxylic acids, 879
Myxicola giant axons, sodium efflux in, 765

N

Nerve, slow sodium inactivation in, after exposure to sulfhydryl blocking reagents, 183
Neuromuscular preparations in vitro, beneficial effect of fluorocarbon emulsion media on function, 655
Node of Ranvier, frog, effects of strychnine on sodium conductance, 915
– of Ranvier, frog, effects of strychnine on potassium conductance, 897
– of Ranvier, frog, pH-dependent rate of action of local anesthetics on, 475

P

Pancuronium interaction with sodium channels in squid axon membranes, kinetic analysis, 293
Phloretin-induced changes in ion transport across lipid bilayer membranes, 243
Phosphate, adenosine tri-, dependency of calcium efflux in dialyzed squid giant axons, 795
–, adenosine tri-, membrane compartmentalized, and its preferential use by Na, K-ATPase of human red cell ghosts, 605
–, guanosine 3′,5′-cyclic mono-, and in vitro physiology of frog photoreceptor membranes, 667
Photoproducts, rhodopsin, and rod sensitivity in skate retina, 97
Phototransduction and enhancement in *Limulus* ventral eye, 553
Phototransduction process and mutant defect, association of, in hereditary retinal degeneration in *Drosophila melanogaster*, 261
Potassium and sodium diffusion potentials with extracellular adenosine triphosphate in dog red blood cells, 417
– conductance of frog node of Ranvier, effects of strychnine, 897
–, extracellular, effect of on intracellular potassium ion activity and transmembrane potentials of beating canine cardiac Purkinje fibers, 463
– ion activity, intracellular, effect of extracellular potassium and transmembrane potentials of beating canine cardiac Purkinje fibers, effect of extracellular potassium, 463
Proteins, contractile, tension generation by threads of, 37

Purkinje fibers, beating canine cardiac, effect of extracellular potassium on intracellular potassium ion activity and transmembrane potentials, 463

R

Radii of blood vessels, and shear forces in cardiovascular system, 449
Reaction, drug-receptor, of local anesthetics, hydrophilic and hydrophobic pathways, 497
Reagents, blocking, sulfhydryl, slow sodium inactivation in nerve after exposure to, 183
Recovery and desensitization at frog neuromuscular junction, 431
Red blood cells. See erythrocytes.
Retina, skate, proximal negative response and visual adaptation, 57
–, skate, rhodopsin photoproducts and rod sensitivity, 97
Rhodopsin photoproducts and rod sensitivity in skate retina, 97
Rod sensitivity and rhodopsin photoproducts in skate retina, 97

S

Skin, frog, active Na transport pathway of, microelectrode studies, 571
Sodium and potassium diffusion potentials with extracellular adenosine triphosphate in dog red blood cells, 417
– channels, interaction with pancuronium in squid axon membranes, kinetic analysis, 293
– conductance, of frog node of Ranvier, effects of strychnine, 915
– efflux in *Myxicola* giant axons, 765
– inactivation, slow, in nerve, after exposure to sulfhydryl blocking reagents, 183
Sodium and potassium transport pathway, active, of frog skin, microelectrode studies, 571
Sorption, differential, of odorant molecules across olfactory mucosa, 343
Strychnine, effects on potassium conductance of frog node of Ranvier, 897
–, effects on sodium conductance of frog node of Ranvier, 915
Sulfhydryl blocking reagents, slow sodium inactivation in nerve after exposure to, 183
System, cardiovascular, shear forces and blood vessel radii, 449
–, nervous, of *Aplysia californica*, metabolism of acetylcholine in, 725
–, visual, of *Drosophila*, frequency characteristics, 705

T

Tension generation by threads of contractile proteins, 37
Transduction, photo-, and enhancement, in *Limulus* ventral eye, 553
Triphosphate, adenosine, dependency of calcium efflux in dialyzed squid giant axons, 795
–, adenosine, membrane compartmentalized, and its preferential use by Na,K-ATPase of human red cell ghosts, 605

U

Uridine transport in human red blood cells, 75

V

Velocity relations, force, of single cardiac muscle cells, calcium dependency, 221
Volume regulation in anisotonic media by flounder red blood cells, 537
